WATO-SOFT

Better customer protection with a bug bounty program

AT A GLANCE

CHALLENGE

- ERP touches the entire value chain of their customers
- Access to sensitive customer data
- Various customer configurations

BENEFITS

- Improved customer protection
- Managed build-up of competencies and scope
- Positive customer feedback
- Continuous security checks

Security is paramount to me. With GObugfree's bug bounty program, we are protecting ourselves, and also our customers.

THOMAS WAGNER
Managing Director

ABOUT WATO-SOFT

WATO-SOFT AG has specialized in Enterprise Resource System (ERP) solutions since 1988. As a long-standing competence center, Wato-Soft offers Swiss SMEs individual and comprehensive IT services from a single source. As a strategic partner, Wato-Soft accompanies its customers from consulting through implementation to maintenance and support, and solves and resolves all IT challenges together with its customers.

CHALLENGE

Because ERP solutions cover the entire value chain of their customers and require access to sensitive customer data, security is a top priority for Wato-Soft. After a pentest, Wato-Soft wanted to add an extra layer of ongoing security checks to its systems. To ensure continuous monitoring of its security risk and better protection of their customers' data, Wato-Soft decided to implement a Bug Bounty pilot program.

BENEFITS

Build experience & competencies

With the pilot program, Wato-Soft is able to gain initial experience with the bug bounty approach. With increasing competency, the scope of the program will be expanded in a sensible way.

Increased customer confidence

The introduction of the bug bounty program has bolstered the confidence of Wato-Soft's customers. It confirms to them that they are working with the right partner - one who takes proactive measures to ensure the security of their software.

Assurance for customers regarding IT security

Thanks to ongoing security checks, Wato-Soft's customers feel they are in good hands, knowing that Wato-Soft is doing everything it can to protect their data in the best possible way and ensure a high level of security.
